

ORACLE®

Restaurant POS hardware

Powered by Symphony POS software

Oracle's hardware and software work just as hard as you do. Our point-of-sale terminals and mobile devices are designed to withstand spills, harsh weather, constant use, and security threats. Powered by Symphony POS software from Oracle, our complete point-of-sale systems help restaurants elevate their speed and quality of service, in-house and online. Analyze sales trends, forecast inventory, update menus, manage employees, and integrate with a wide variety of popular third-party apps.

Meet the Oracle MICROS Workstation 8

The Oracle MICROS Workstation 8 Series is the latest addition to the Oracle MICROS portfolio of hospitality hardware solutions. Featuring a slim, 14-inch touchscreen display and warm platinum finish, the Workstation 8 fuses its modern, sophisticated look with the reliability and dependability Oracle MICROS customers have come to trust.

POS Mobile hardware: Castle

The restaurant business is tough

Payment processing from Oracle just got better. The Oracle MICROS Symphony mobile order and payment processing solution puts a full restaurant POS with contactless payment in the hands of every server. With our all-in-one mobile solution you get simple transparent payment terms with no hidden fees, a single line of support for your entire operation from POS to payment disputes, and the power of Symphony in the palm of your hand.

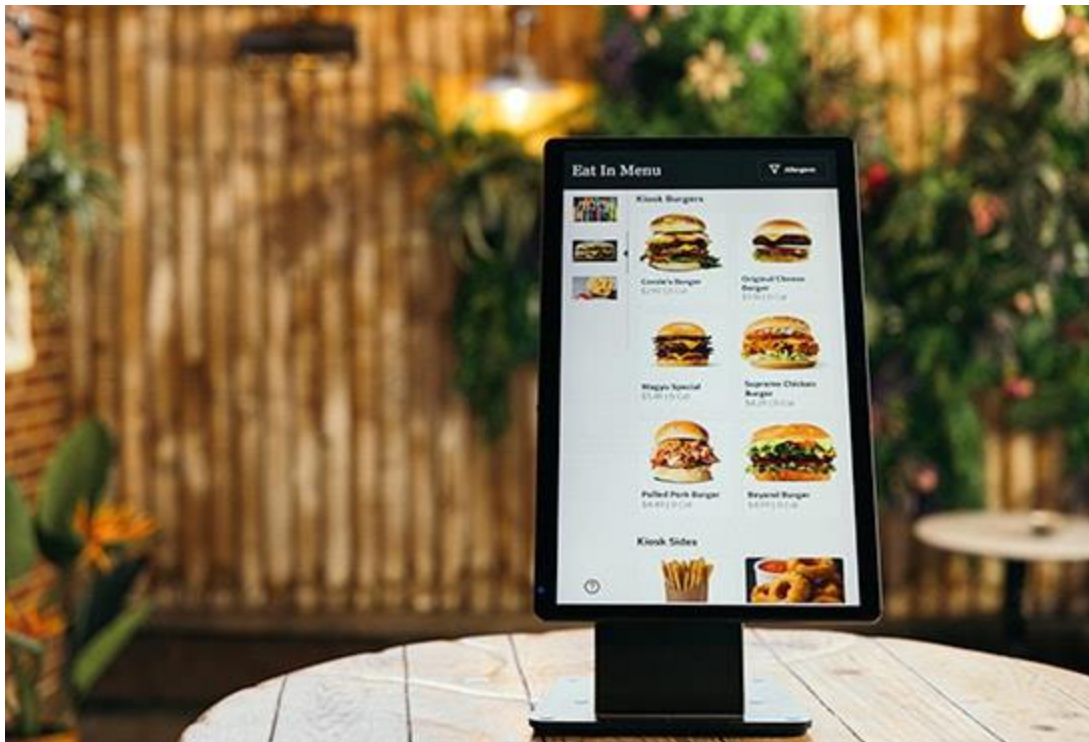

POS hardware: Workstation 6 Series

The restaurant business is tough on technology. You need point of sale hardware with modern features that can also withstand the demands of hard day-to-day use. As our flagship POS terminal, the iconic Oracle MICROS Workstation 6 is purpose-built for the restaurant environment with the processing power, payment capabilities, and durability you need to deliver a flawless customer experience. It also looks good, featuring a stylish, modern design and a slim footprint. Key features include:

Your choice of Windows or Linux operating system

Large, durable screen for easier order entry

Dual-core processors for quick response and transaction speed

Self-service kiosks

Our self-service kiosk features a stunning HTML5 user experience, powered by Symphony. Its user-centric design makes it the perfect choice for high-volume use at concession stands and quick-service restaurants. Additional peripherals such as kiosk stands, receipt printers, and payment processing devices are also available.

POS hardware: Workstation 3 Series

This extremely durable 10-inch portable restaurant POS machine is built to last far longer than consumer-grade tablets, especially at high-volume concession stands, sun-soaked poolside bars, food trucks, and other remote locations where conditions are rough and electrical outlets are out of reach. The Oracle MICROS Workstation 3 comes packed with peripheral ports, magnetic stripe reader, and customer-facing display. Additional options include:

Full-shift batteries

Wi-Fi connectivity

Fingerprint reader

Multiple mounting choices

Tablet 700 Series

Our 7-inch LED-backlit touchscreen tablet is used in a wide range of settings from table service to concession stand lines. It's far more durable than consumer-grade tablets and supports hot-swappable 8-hour batteries for uninterrupted service. With integrated Wi-Fi, it also acts as a mobile reporting device, giving managers real-time access to table management, inventory, sales, and employee data.

Tablet 700 Series options

Compact secure credit card processor

Bring the world's most secure restaurant point of sale machine to your customers and process transactions faster by adding our compact credit card reader hardware to the back of your Oracle MICROS 700 Series tablets. Other accessories include:

Barcode scanner

Rear-facing camera

Comfortable leather and Velcro hand straps

Multidock charging station

Kitchen display system hardware (KDS)

Coordinate the actions of hosts, waitstaff, kitchen staff, and bussers to provide better service and build customer loyalty. With Oracle MICROS kitchen display systems, orders are transmitted to the kitchen display instantly. Status updates are provided constantly, helping restaurants monitor table and order status in real time. Hardware options include:

Kitchen display touchscreens

Bump bars for controlling non-touchscreen displays

Screen stands and mounting hardware

POS hardware accessories

Receipt printers, credit card readers, mobile wallet readers, customer-facing screens, POS scales, barcode scanners, and cash drawers. We've got you covered.
